Claim 11; Page 27; 36pp; English.

Controlling the availability and/or signal transduction capability of a cell surface receptor, useful for treating growth hormone deficiencies.

This sequence is from the intracellular domain of the growth hormone receptor. This sequence is an example of a binding site motif AAY32790.

This motif is used in a method for controlling the availability and signal transduction capability of a cell surface receptor by administering an inhibitor that is capable of inhibiting proteolytic cleavage of the receptors being present on the surface for longer and therefore in the receptors being present on the surface for longer and therefore signalling for longer to the interior of the cell. This increases the sensitivity of cells to any hormones which might be present. The binding contif, of which this sequence is an example, is located at or around a cubiquitin and/or ubiquitin/proteosome complex binding site. The inhibitor of the method is either derived from, competes with, or binds to this binding motif. The inhibitor may be used to treat muscle wasting, associated with disorders such as remal tubular defects, uraemia, associated with disorders such as remal tubular defects, uraemia, after diabetes, Cushing's syndrome, cachexias, eating disorders, AIDS, after

```
This sequence is a growth hormone receptor polypeptide. Polypeptides for the upregulation of the growth hormone receptor are derived from this sequence e.g. AAN32793. Variants (AAN32794-Y32823) of the derived from this sequence e.g. AAN32793. Variants (AAN32794-Y32823) of the derived to sequence e.g. AAN32793. Variants (AAN32794-Y32823) of the derived controlling proteosome binding site located on the intracellular part of a cell surface receptor. These sequences are used in a method for controlling the availability and signal transduction capability of a cell surface receptor by administering an inhibitor that is capable of inhibiting proteolytic cleavage of the receptor. Inhibition of this controlling proteolytic cleavage of the receptors being present on the surface for longer and therefore signalling for longer to the interior of the cell. This increases the sensitivity of cells to any hormones which can might be present. The inhibitor is either derived from, competes with or binds to a polypeptide sequence of which sequences AAY32794-Y33823 are complete. The inhibitor may be used to treat muscle wasting, associated contains a sensiting disorders, AIDS, after stress and Anvier Anivernal Andal Anvier Aniversal and Anvier Aniversal Andal Aniversal Andal Aniversal Andal Aniversal Andal Aniversal Andal Aniversal Andal Aniversal Ani

This method enables continuous growth of target
The sequence was deduced from a clone isolated from a rabbit liver cDNA lambda gtll library. The DNA can be inserted into an expression vector for prodn. of the recombinant GHR which is used to treat GH-related disorders such as gigantism and acromegally. A hydropathy plot revealed an extracellular GH binding domain, a transmembrane domain, and an intracellular signalling domain. Eight potential N-linked glycosylation sites are predicted. This protein sequence comprises human growth hormone receptor. The amino acid sequence was deduced from cDNA clones (see AAT94063) obtained from a human liver cDNA library, and shows 84% identity to the rabbit growth hormone receptor (see AAW33395). Human growth hormone receptor, its derivatives in which the cytoplasmic or transmembrane domains are deleted, and growth hormone binding proteins comprising amino acids 190-246 or 1-324 of the mature protein, can be used to treat disorders associated with growth hormone over-expression, e.g. gigantism and acromegally. The binding protein may also be used to increase the stability and efficacy of growth hormone in vivo. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human and rabbit growth hormone receptor protein - useful to treat disorders associated with overexpression, e.g. gigantism and acromegaly.

```
This protein sequence comprises rabbit growth hormone receptor. The amino acid sequence was deduced from cDNA clones (see AAT94064) obtained from a rabbit liver cDNA library, and shows 84% identify to the human growth hormone receptor (see AAN3394). Rabbit and human growth hormone receptors, their derivatives in which the cytoplasmic or transmembrane domains are deleted, and growth hormone binding proteins comprising amino acids 190-246 or 1-324 of the mature proteins, can be used to treat disorders associated with growth hormone over-expression, e.g. gigantism and acromegaly. The binding protein may also be used to increase the stability and efficacy of growth hormone in vivo. (Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a comprising the vector. Among the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal cubjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a contivity in an animal of one or more of the polypeptides or their antibodies. The polynucleotide or the compound that requires its activity is useful for preparing a medicament for ireating pain and a pharmaceutical composition comprising the one or more polymers is sectivity is useful for preparing a medicament for treating compliant (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene continued is a human protein (shown in Table 2 of therapy). The sequence presented is a human protein (shown in Table 2 of
                                            .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, cartainty or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence of which is differentially regulated in an animal subjected to pain and a tray, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity a compound useful in the regulating a compound to small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating rain and a wharmacentrical composition comprising the one or more
                                                                                                                                                                                                                                                                                           o;
the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, pain, neuronal tissue, gene therapy, spinal segmental nerve injury, chronic constriction injury, CCI; spared nerve injury, SNI; Chung.

pain and a pharmaceutical composition comprising the one or more

```
The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, and enrivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal complexed to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a
                                                                                                                                                                                                                                                                                                      Ö
polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic construction injury (CI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.

activity in an animal of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis

Claim 20; Page 189-190; 1963pp; English.

```
contribution also relates to vectors and recombinant most centry of uncleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides in a sample, and methods of identifying compounds which colypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention activities; atem cell growth cactivity; and hence of inferentiation activities; stem cell growth activity; and including cytokine, cell proliferation or cell differentiation activity; activit, or inhibin-related activities; concentration or metastasis.

Concentration activities; receptor or ligand activities; or may be involved in oncogeneais, cancer cell proliferation or metastasis.

Conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell cancers, haematopoletic disorders (e.g., myeloid or lymphoid cell cancers), chronic inflammatory conditions (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease, arterial isohemana, bone disorders (e.g., osteoporosis), while those with conditions and useful or nucleic acids encoding them) may be used to promote wound certain and fungal infections in addition to immune disorders.

Competerial and fungal infections in addition to immune disorders or promote cell growth. For example, such polypeptides may be used to promote cell growth. For example, such polypeptides and nucleic each summent or replace cells encoding the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention
Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Somatotropin receptor; SR; somatotropin binding protein; SBP; pRAT7-12;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

intracellular part of a cell surface receptor. These sequences are used in a method for controlling the availability and signal transduction capability of a cell surface receptor by administering an inhibitor that is capable of inhibiting proteolytic cleavage of the receptor. Inhibition of this proteolytic cleavage results in the receptors being present on the surface for longer and therefore signalling for longer to the interior of the cell. This increases the sensitivity of cells to any hormones which might be present. The inhibitor is either derived from, competes which might be present. The inhibitor is either derived from, competes which aight be present. The inhibitor is either derived from, and yary 32794-73823 are examples. The inhibitor may be used to treat muscle wasting, associated with disorders such as renal tubular defects, uraemia, diabetes, Cushing's syndrome, cachexias, eating disorders, AIDS, after stress and during neuromuscular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ·

A.Title: Nucleotide sequence and structure of the arylphorin gene from Galleria mellonel A, Reference number: A61619
A, Accession: A61619
A, Accession: A61619
A, Molecule type: DNA
A, Residues: 1-702 < AREM>
A, Residues: 1-702 < AREM>
A, Residues: 1-702 < AREM>
A, Residues: 1 & PID: G159078
A, Note: in the authors' translation, residue 306-Leu is omitted, residue 317-Asn is dupl C, Genetics: 30/1; 74/3; 352/3; 410/2
A, Note: single copy gene
C, Genetics: single copy gene
C, Genetics: single sopy gene
C, Geyperfamily: arylphorin
C; Keyperfamily: arylphorin
C; Keyperfamily: arylphorin
C; Keyperfamily: singlal sequence #status predicted <SIG>
F;1-16/Domain: signal sequence #status predicted <SIG>
F;211, 481/Binding site: carbohydrate (Asn) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   C;Accession: A34287

Evidence for two mechanisms for the generation of the GH binding protein.";
J. Biol. Chem. 272:18951-18958 (1997).
-!- FUNCTION: This is a receptor for pituitary gland growth hormone.
-!- SUBCURIT: Homodimer (By similarity).
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- SUMILARITY: Belongs to the type I cytokine family of receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

-!- SUBCELLUIAR LOCATION: Type I membrane protein.
-!- SIMILARITY: Belongs to the type I cytokine family of receptors.
Subfamily 1.
-!- SIMILARITY: Contains 1 fibronectin type III domain.

                                                                                                                                                                                                                                                                                                -!- FUNCTION: This is a receptor for pituitary gland growth hormone -!- SUBUNIT: Homodimer.
                                                                                                                                                                                                                                                                                                                          -:- SUBCELLULAR LOCATION: Type I membrane protein.
-:- SIMILARITY: Belongs to the type I cytokine family of receptors.
Subfamily II.
-:- SIMILARITY: Contains 1 fibronectin type III domain.
                                                                                                                                                                                                                         Leung D.W., Spencer S.A., Cachianes G., Hammonds R.G., Collins C., Henzel W.J., Barnard R., Waters M.J., Wood W.I.; Growth hormone receptor and serum binding protein: purification, cloning and expression.";

Mol. Endocrinol. 2:108-116(1988).

-!- FUNCTION: Isoform 1 is a receptor for pituitary gland growth hormone. Isoform 2 is a serum growth hormone binding protein that may play an important role in regulating the effective serum concentration of gh.

-!- SUBUNIT: Isoform 1 is a homodimer.

-!- SUBUNIT: Isoform 1.

"Molecular cloning of the chicken growth hormone receptor
complementary decoxyribonucleic acid: mutation of the gene in
sex-linked dwarf chickens.";
Endocrinology 128:3183-3192(1991).
--- FUNCTION: This is a receptor for pituitary gland growth hormone.
                                                                                                                                                                                                                                                                            -i- SUBUNIT: Homodimer.
-i- SUBCELULAR LOCATION: Type I membrane protein.
-i- TISSUB SPECIFICITY: Broad specificity.
-i- SIMILARITY: Belongs to the type I cytokine family of receptors

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cheng C.H.K., Shaw P.C., Teim K.W.K., Lau K.F.;
Submitted (JAN-1996) to the EMBL/Genbank/DDBJ databases.
-!- FUNCTION: This is a receptor for pituitary gland growth hormone.
-!- SUBDUIT: Homodimer (By similarity).
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- SIMILARITY: Belongs to the type I cytokine family of receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (POTENTIAL).

J. Biol. Chem. 264:11020-11025(1989).

-!- FUNCTION: Larval storage protein (LSP) which may serve a of amino acids for synthesis of adult proteins.

-!- SUBCELLULAR LOCATION: Extracellular.

-!- TISSUE SPECIFICITY: Fat body.

-!- SIMILARITY: TO ARYLPHORINS AND TO ARTHROPOD HEMOCYANINS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- TISSUE SPECIFICITY: EXPRESSED IN ADULT LUNG AND LIVER, AND FETAL LIVER, BRAIN, INTESTINE AND PLACENTA.
-!- SIMILARITY: Belongs to the Tyr family of protein kinases.
-(SF-1/PDGF receptor subfamily.
-!- SIMILARITY: Contains 7 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           POTENTIAL.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Controlling the availability and/or signal transduction capability of a cell surface receptor, useful for treating growth hormone deficiencies.

Claim 11; Page 27; 36pp; English.

This sequence is from the intracellular domain of the growth hormone receptor. This sequence is an example of a binding site motif AAY32790. This motif is used in a method for controlling the availability and signal transduction capability of a cell surface receptor by administering an inhibitor that is capable of inhibiting proteolytic cleavage results cleavage of the receptor. Inhibition of this proteolytic cleavage results in the receptors being present on the surface for longer and therefore signalling for longer to the interior of the cell. This increases the sensitivity of cells to any hormones which might be present. The binding motif, of which this sequence is an example, is located at or around a ubiquitin and/or ubiquitin/proteosome complex binding site. The inhibitor derived from, competes with, or binds to this binding motif. The inhibitor may be used to treat muscle wasting, associated with disorders such as renal tubular defects, ursemia, clabetes, Cushing's syndrome, cachexias, eating disorders, AIDS, after

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence is a growth hormone receptor polypeptide. Polypeptides for the upregulation of the growth hormone receptor are derived from this sequence e.g. ANY32239. Variants (ANY32794.Y32823) of the derived sequence e.g. ANY32293. Variants (ANY32794.Y32823) of the derived sequence are examples of polypeptide sequences found at or near the cubiquitin/proteosome binding site located on the intracellular part of a cell surface receptor. These sequences are used in a method for controlling the availability and signal transduction capability of a cell surface receptor by administering an inhibitor that is capable of inhibiting proteolytic cleavage of the receptors being present on the curface for longer and therefore signalling for longer to the interior of the cell. This increases the sensitivity of cells to any hormones which might be present. The inhibitor is either derived from, competes with or binds to a polypeptide sequence of which sequences ANY32794-Y3283 are changed to a proper such as renal tubular defects, uraemia, diabetes, with disorders such as renal tubular defects, uraemia, diabetes, and during neuromuscular disease
                                                                                                                    ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Controlling the availability and/or signal transduction capability of a cell surface receptor, useful for treating growth hormone deficiencies.

                                                                                        The sequence was deduced from a clone isolated from a rabbit liver cDNA lambda gtll library. The DNA can be inserted into an expression vector for prodn. of the recombinant GRR which is used to treat GH-related disorders such as gigantism and acromegaly. A hydropathy plot revealed an extracellular GH binding domain, a transmembrane domain, and an intracellular signalling domain. Bight potential N-linked glycosylation sites are predicted. See also AAP81126 and AAN81718-9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                  The sequence was deduced from a clone isolated from an adult liver cDNA lambda gill library. The DNA can be inserted into an expression vector for prodn. of the recombinant GHR which is used to treat GH-related disorders such as gigantism and acromegaly. A hydropathy plot revealed an extracellular GH binding domain, a transmembrane domain, and an intracellular signalling domain. Eight potential N-linked glycosylation sites are predicted.                                                                                    ò
                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This protein sequence comprises human growth hormone receptor. The amino acid sequence was deduced from cDNA clones (see AAT94065) obtained from a human liver cDNA library, and shows 84% identity to the rabbit growth hormone receptor (see AAM93395). Human growth hormone receptor, its deleted, and growth hormone binding proteins comprising amino acids 190-246 or 1-224 of the mature protein, can be used to treat disorders associated with growth hormone over-expression, e.g. gigantism and scromegaly. The binding protein may also be used to increase the stability and efficacy of growth hormone in vivo. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human and rabbit growth hormone receptor protein - useful to treat disorders associated with overexpression, e.g. gigantism and acromegaly.
                                                                                                                                                    Growth hormone receptor; growth hromone binding protein; somatotropin; human; gigantism; acromegaly; therapy.

This protein sequence comprises rabbit growth hormone receptor. The amino acid sequence was deduced from cDNA clones (see AAT94064) obtained from a rabbit liver cDNA library, and shows 84% identity to the buman growth hormone receptor (see AAW3394). Rabbit and human growth hormone receptors, their derivatives in which the cytoplasmic or transmembrane domains are deleted, and growth hormone binding proteins comprising amino acids 190-246 or 1-324 of the mature proteins, can be used to treat disorders associated with growth hormone over-expression, e.g. gigantism and acromegaly. The binding protein may also be used to increase the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and acromegaly. The binding protein may also be used to increase the stability and efficacy of growth hormone in vivo. (Updated on 25-MAR-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention discloses a composition comprising two or more isolated rat or human polynuclectides or a polynuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic polynuclectide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (CMI), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                       Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the movel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the composition, a method for identifying a paramaceutical composition, a method for identifying a compound useful in the cativity in an animal of one or more of the polypeptides given in the expression of a method for identifying a compound useful in the cativity in an animal of one or more of the polypeptides given in the cativity in an animal of one or more of the polypeptides given in the cativity in a method for identifying a compound useful in treating
                                                                                                                                                                                               .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention discloses a composition comprising two or more isolated rat or human polymuclectides or a polymuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymuclectide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a tto perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a
      the compound that
polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                             Gaps

ö
method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; cytokine; cell proliferation; cell differentiation; growth factor; haematopoiesis regulation; tissue growth; immunomodulator; activin; inhibin; chemotaxis; chemokinesis; thrombolysis; oncogenesis; proliferation; metastesis; cancer; tumour; haematopoietic disorder; myeloid cell disorder; lymphoid cell disorder; lymphoid cell disorder; asthma; arthritis; atherosclerosis; coronary heart disease; arterial ischaemia; hone disorder; osteoporosis; vascular growth disorder; tissue regeneration; wound healing; infection; immune disorder; cell culture; drug screening; gene therapy; antiantlammatory; antiarthritic; haemostatic; antiarteriosclerotic;

by tentual unexapetute applications. The polypeptides of the invention may differential unexapetute applications. The polypeptides of the invention activities, including cytokine, cell proliferation or cell differentiation activities, stem cell growth actor activity; haematopoiesis regulatory activity; tissue growth activity; conditions care receptor or inhibin-related activities; chemocactic or chemokinetic activities, haemastatio, thrombotic or thrombolytic activities; ancer cell proliferation or metastasis. Chemocancesis, cancer cell proliferation or metastasis. Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoletic disorders (e.g., myploid or lymphoid cell disorders (e.g., myploid or lymphoid cell disorders (inflammatory conditions (e.g., asthma or arthritis), crancers, haematopoletic disorders (e.g., myploid or lymphoid cell disorders disorders (e.g., myploid or promote wound crancerial ischaemia, bone disorders (e.g., myploid or promote wound crepair (or nucleic acids encoding them) may be used to promote wound healing (e.g., of burns, incisions and ulcers), while those with immunombulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders. Common tells in culture to give rise to neuroepithelial cells can promote cell growth. For example, such polypeptides may be used to autoimmune disease or accidental danage. The present sequence represents a novel human conditions, and in drug screening techniques. The present sequence represents a novel human condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0
Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent mucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a muclectide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Somatotropin receptor; SR; somatotropin binding protein; SBP; pRAT7-12;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C; Comment: This protein is an endothelial-specific receptor and binds vascular endothel:

C; Superfamily: unassigned Ser/Thr or Tyr-specific protein kinases; protein kinase homolo

C; Keywords: ATP: embryo; growth factor receptor; transmembrane protein

F; 1-20/Domain: signal sequence #status predicted <SIG>
F; 789-810/Domain: transmembrane #status predicted <TWM>
